The purpose of this work was to isolate the strains of  
Aspergillus niger active in the field of biosynthesis of  
citric acid production. Among 26 investigated strains  
half were producing citric acid with a yield of above  
50% in relation to sucrose used in the medium. Three  
strains among them were quite highly active in citric

DESCRIPTORS: \*Psychooses, \*Drugs, Therapy, Dosage,  
Toxicity, \*Phenothiazine derivatives.

The experimental product UCB 3412 shows great im-  
provement over already known neuroplegic drugs. It  
gives practically no side effects and requires low  
dosage, allowing remarkable results in cases where  
all other treatments completely failed. It not only  
produces very satisfactory sedation; it also cancels  
delirious and even hallucinatory activities. (Author)
